

# Approval is a capacity-constrained risk service

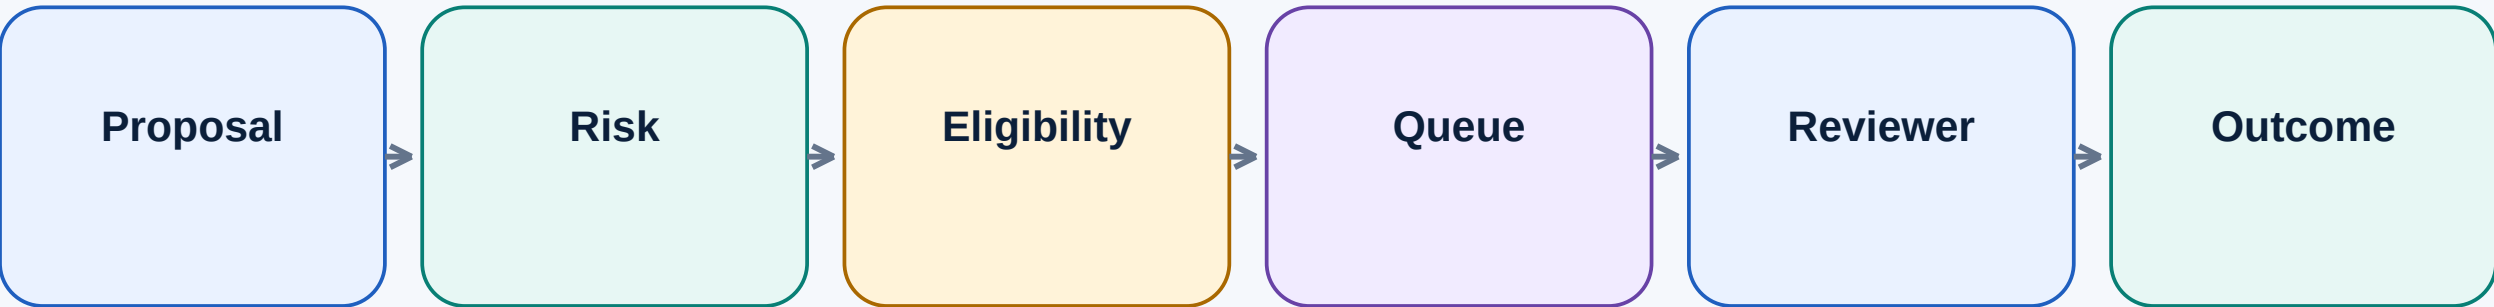

A 97% approval rate can coexist with an unstable review system.

## THE OPERATING NUMBER

**42 / 50 = 84%**

Illustrative arrival rate, hourly capacity and reviewer utilization

## CONTROL PATH

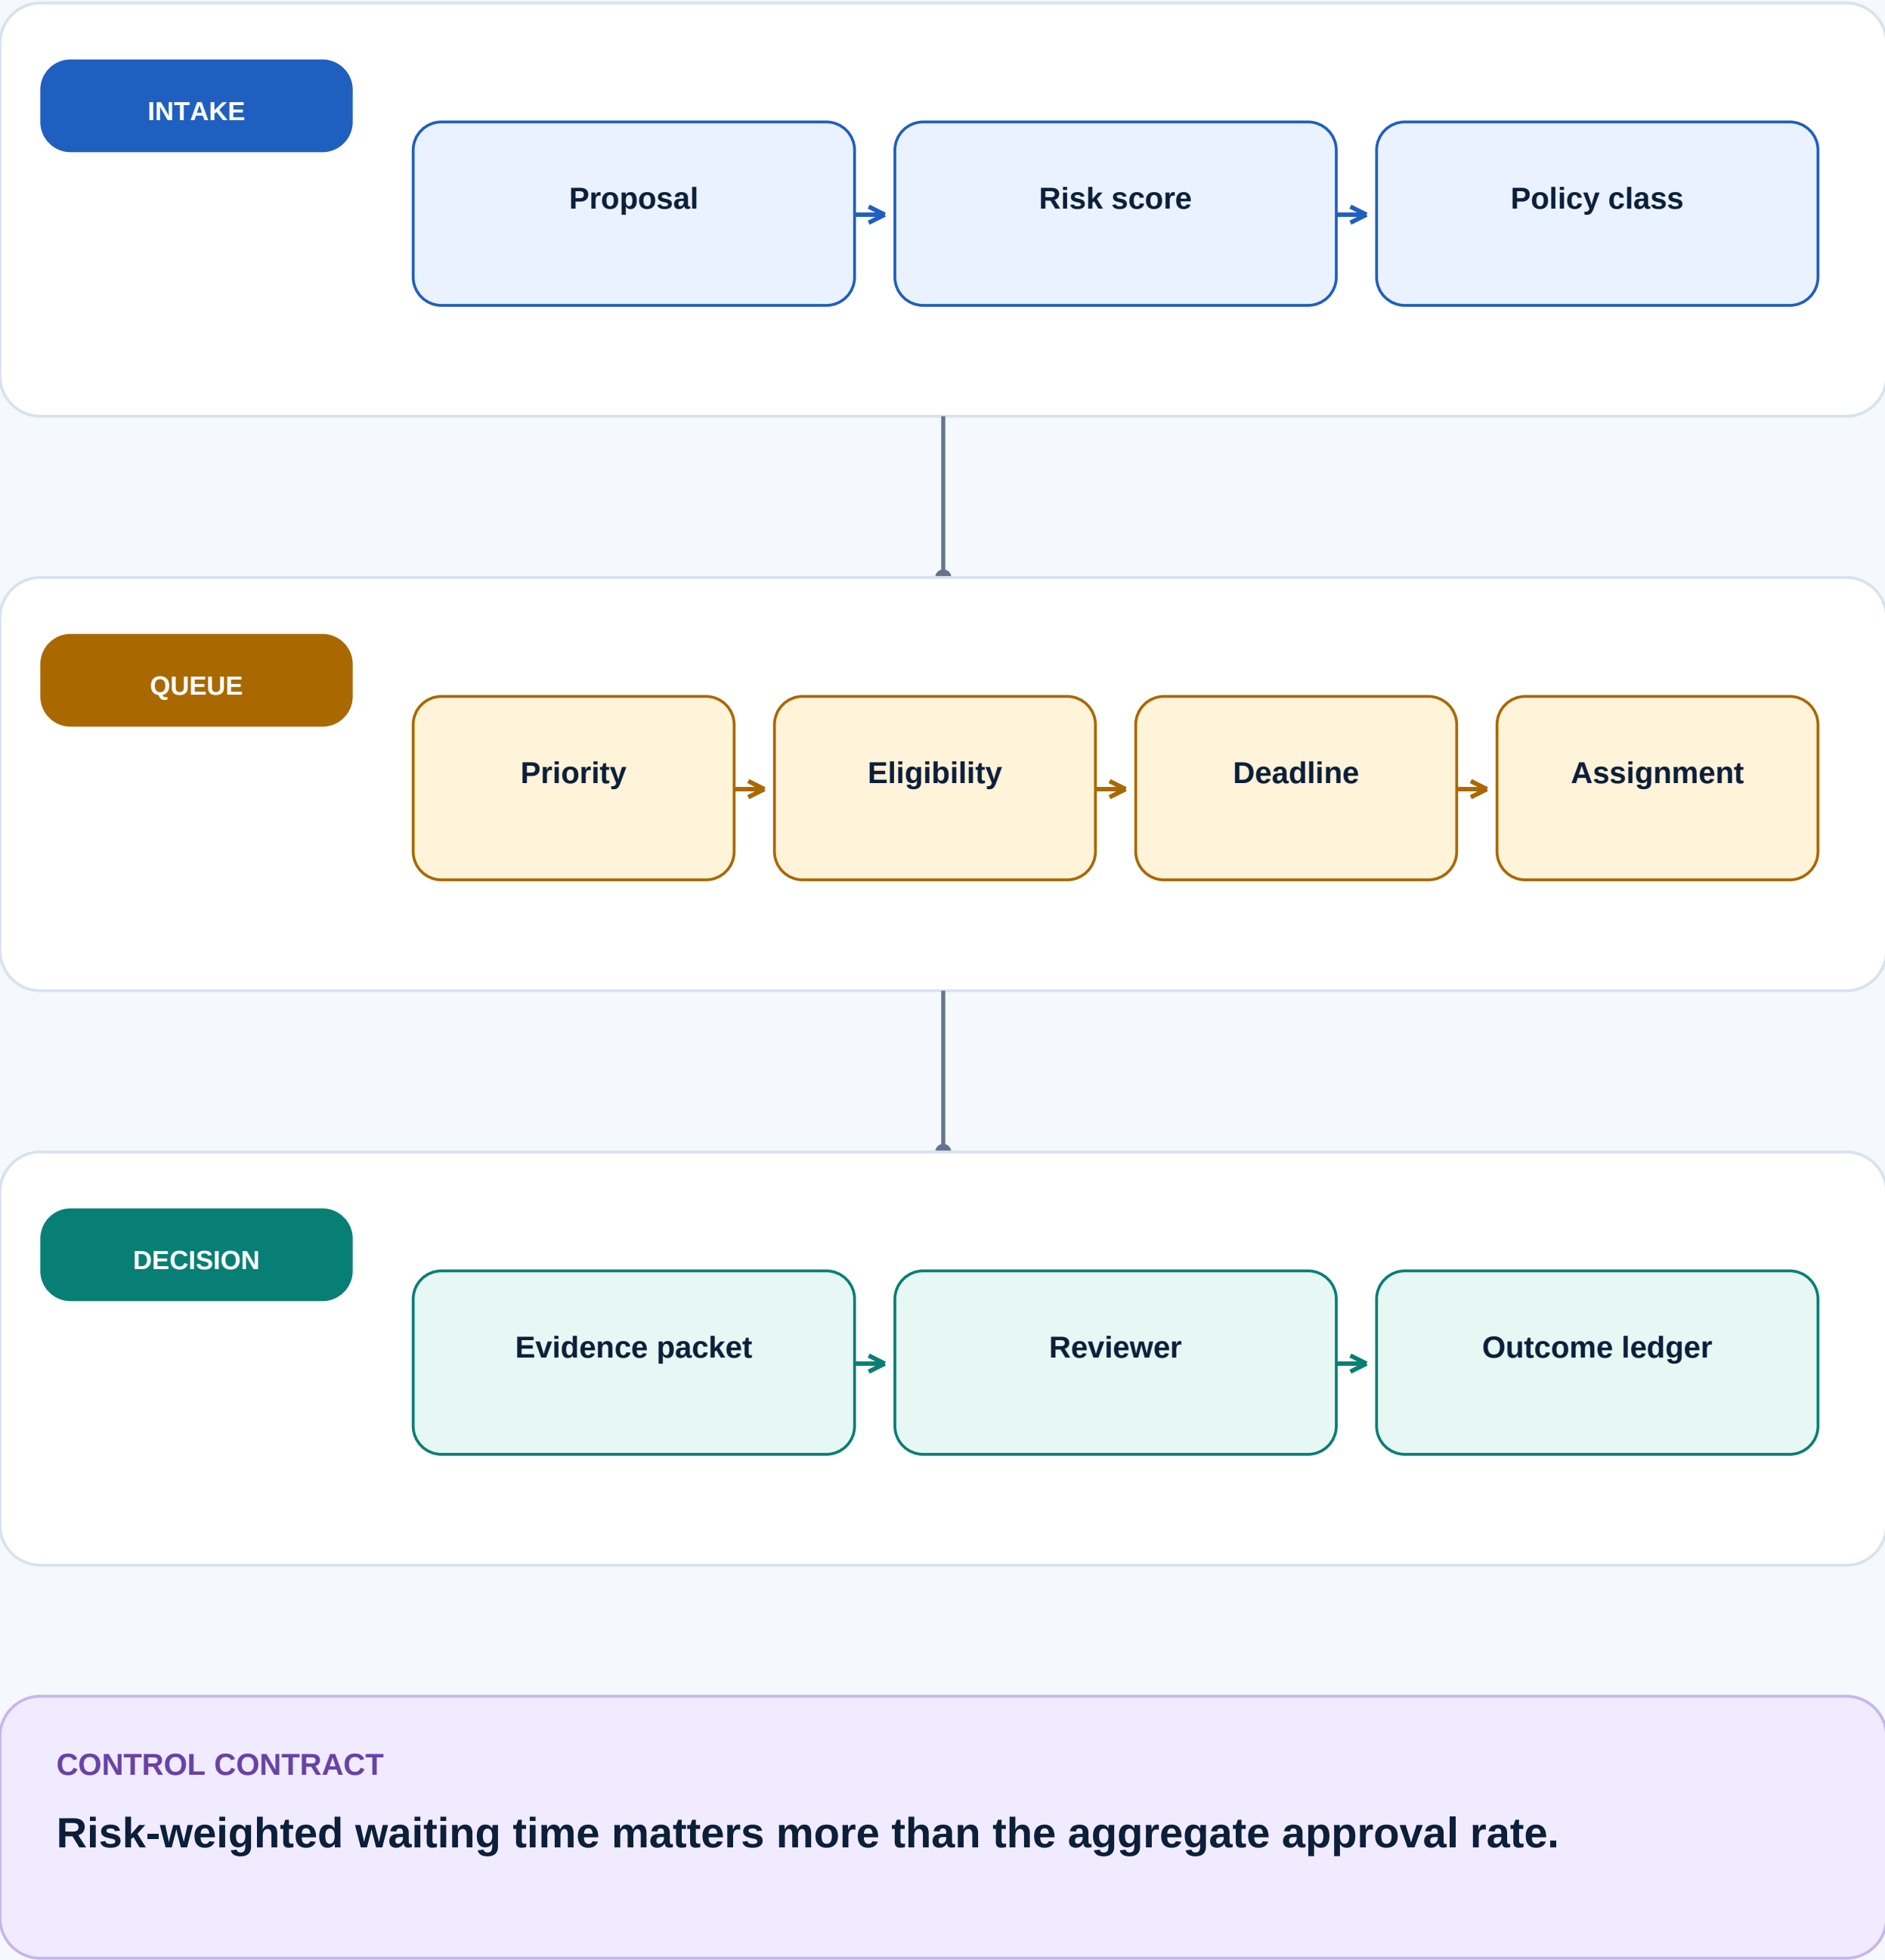

## DESIGN PRINCIPLE

**Risk-weighted waiting time matters more than the aggregate approval rate.**

# Human Approval control architecture

Explicit planes separate decision, authority, execution and proof.

# Two more arrivals can change the operating regime

At 52 arrivals/hour, five reviewers cannot stabilize the queue
