

Fluent agents do not create reliable coordination

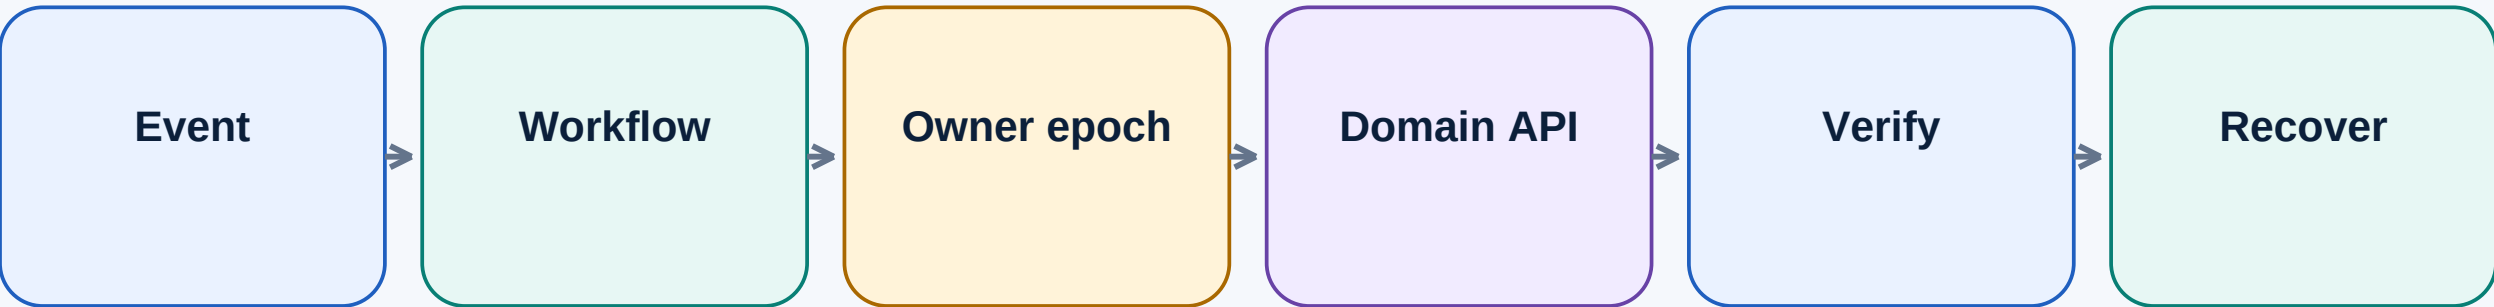

Distributed workflows need invariants, fenced ownership and explicit recovery.

THE OPERATING NUMBER

8 invariants

Ownership, uniqueness, causality, durability, authority, proof, lineage and recovery

CONTROL PATH

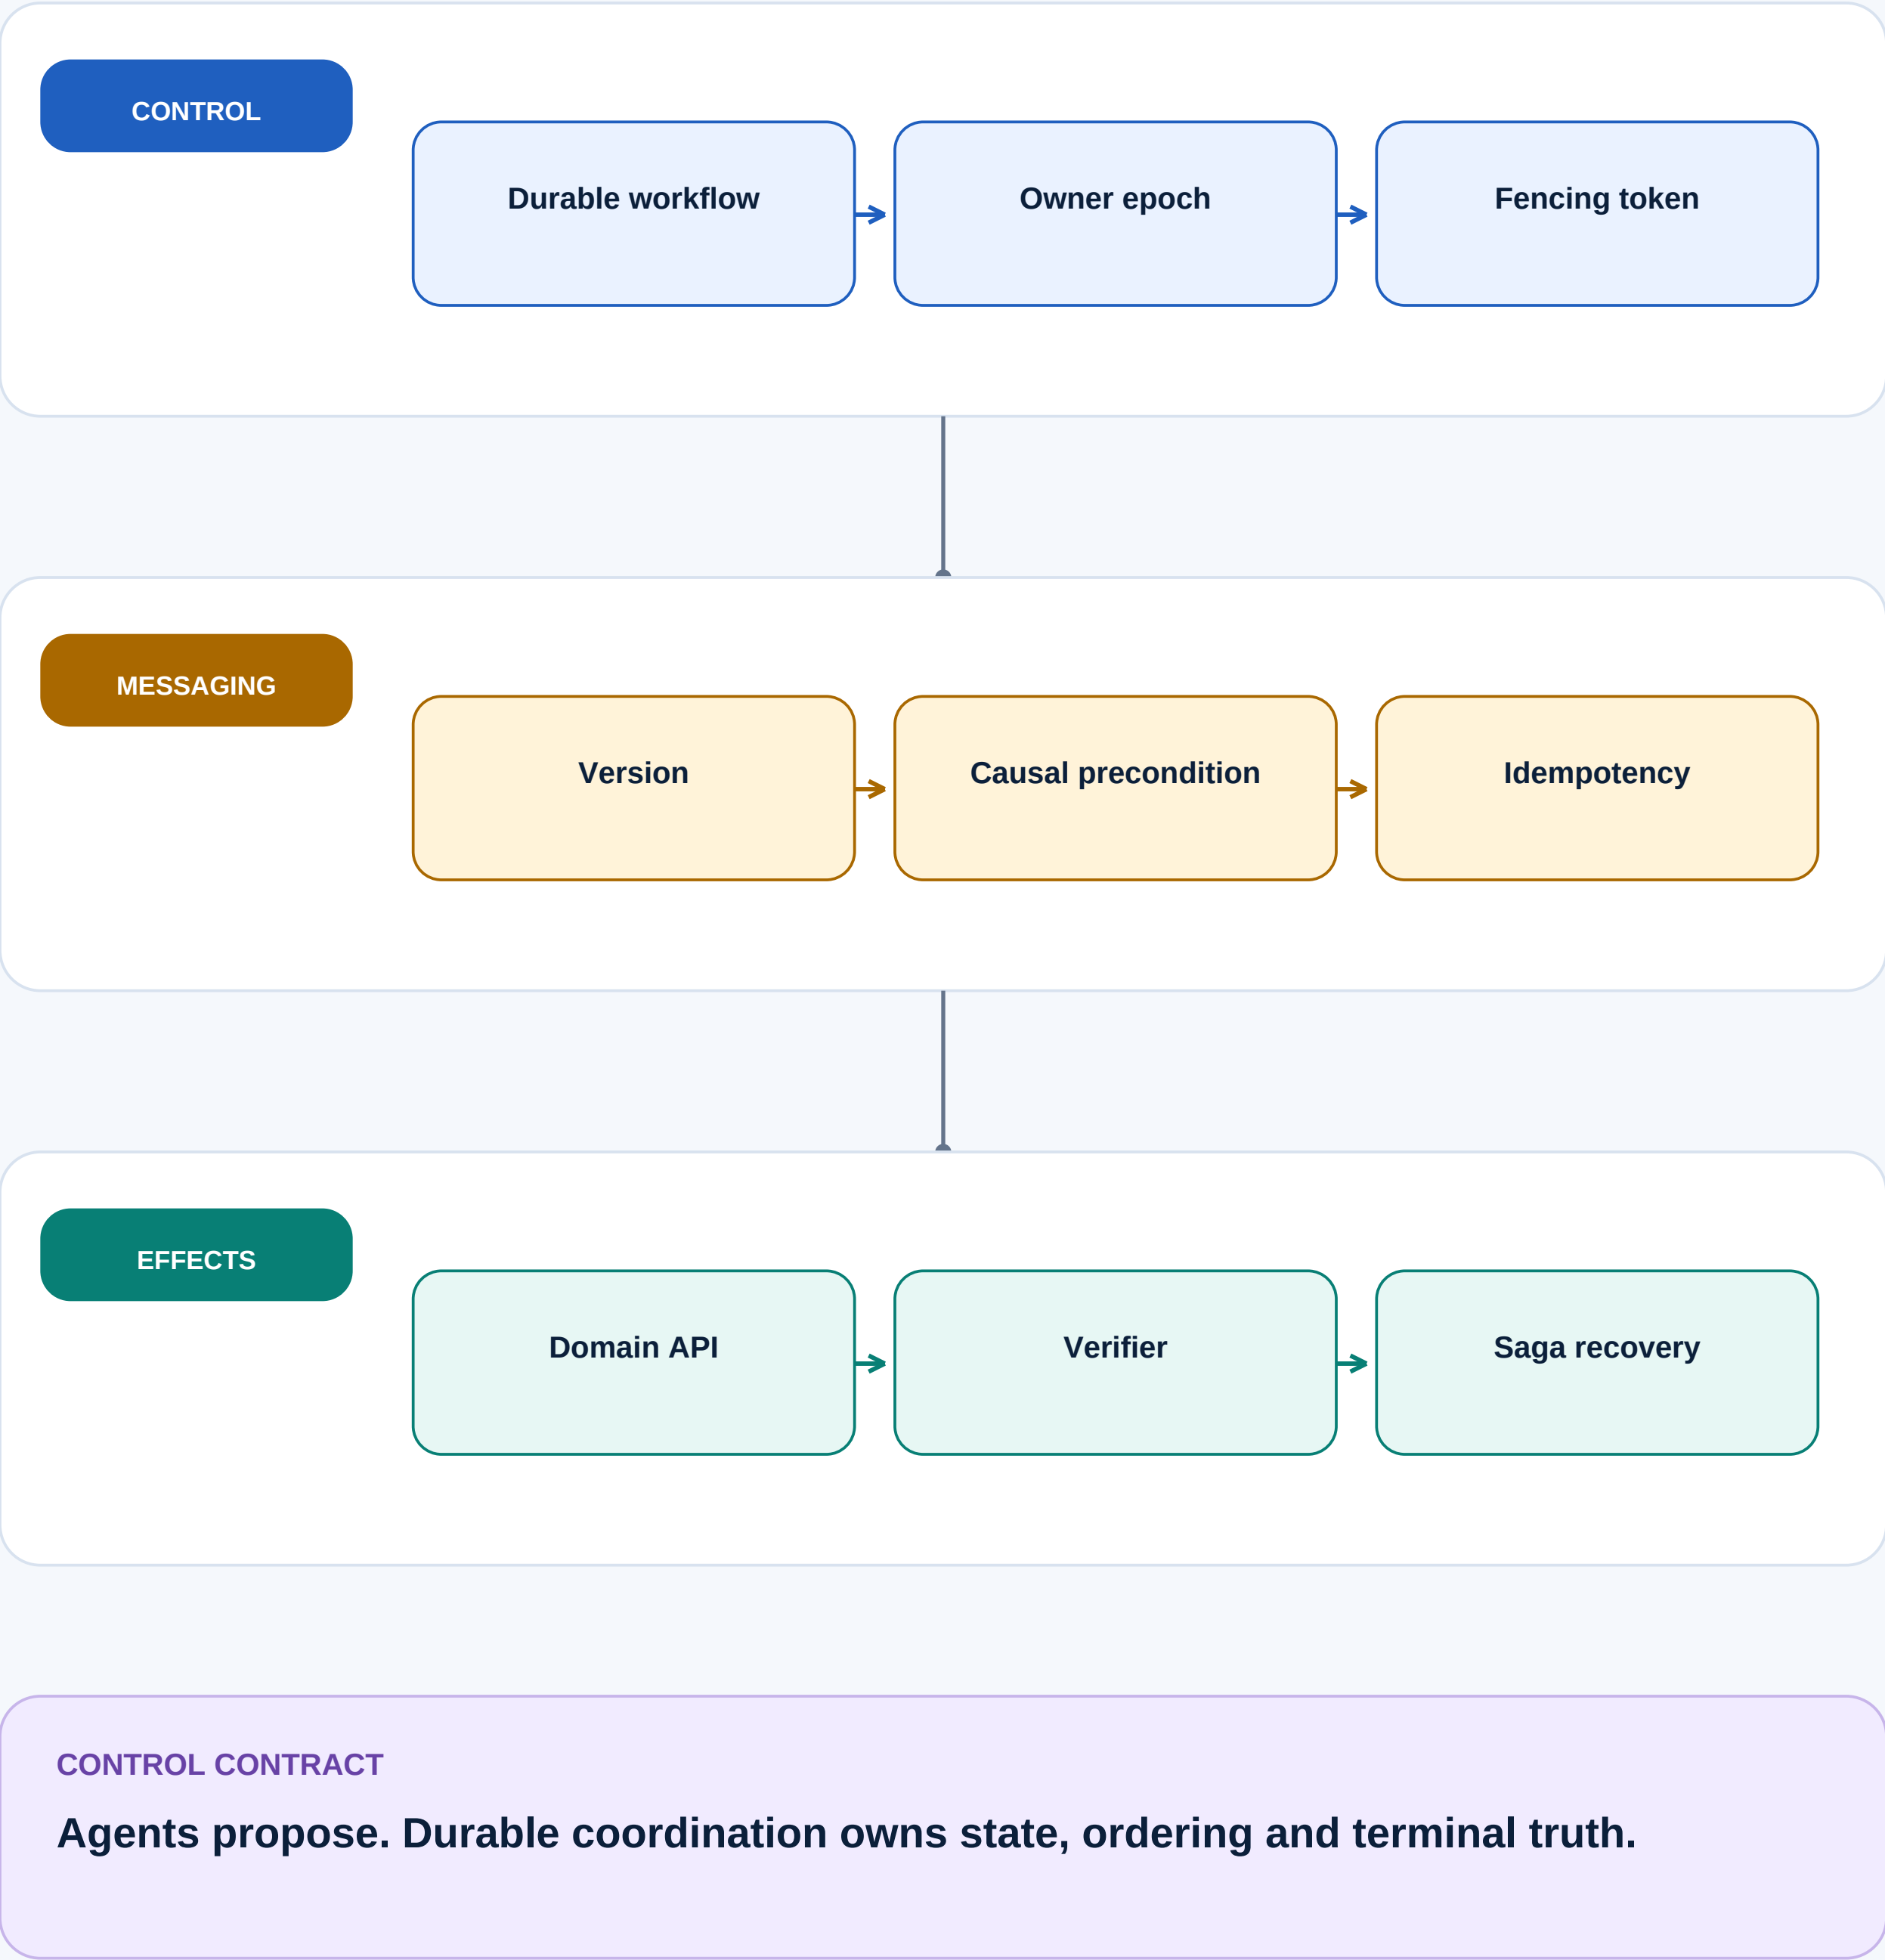

DESIGN PRINCIPLE

Agents propose. Durable coordination owns state, ordering and terminal truth.

Multi-Agent Systems control architecture

Explicit planes separate decision, authority, execution and proof.

Average success hides the unsafe tail

Zero duplicates is not enough when ambiguity and compensation miss their gates

PASS

0

Duplicate effects

PASS

Ambiguity age p99

DECISION RULE

No action commits without the current owner epoch, idempotency key and verified postcondition.
