

Model routing is a portfolio decision

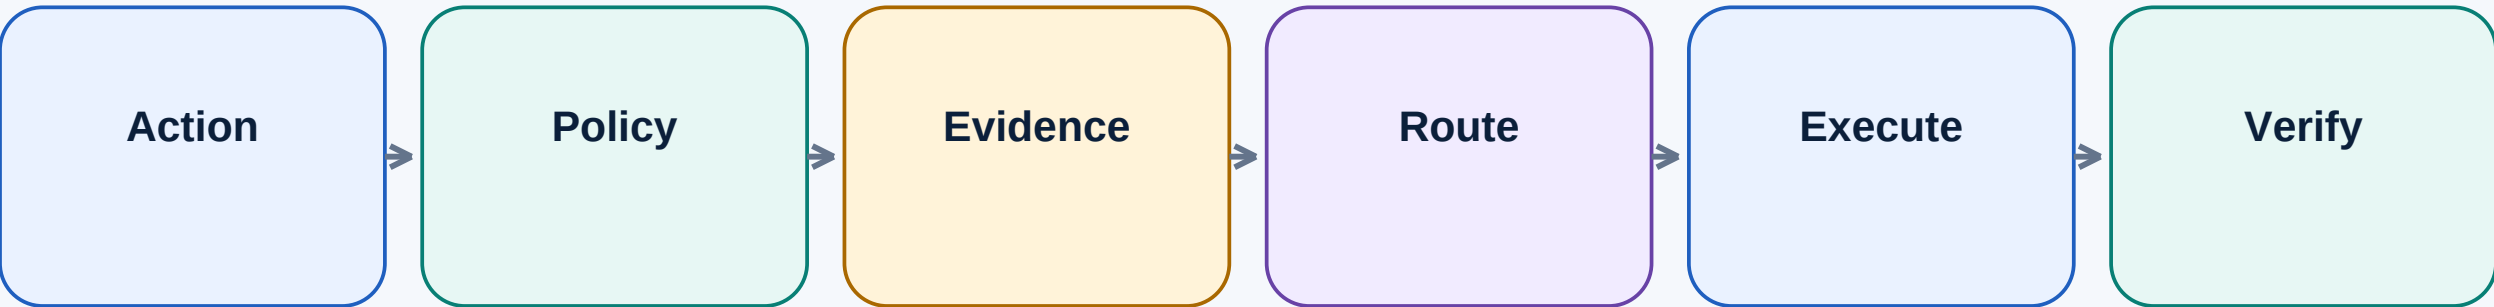

Difficulty is not exposure; optimize the whole route bundle.

THE OPERATING NUMBER

\$0.186 / workflow

Illustrative completed-workflow cost across model, tools, verification, retries and recovery

CONTROL PATH

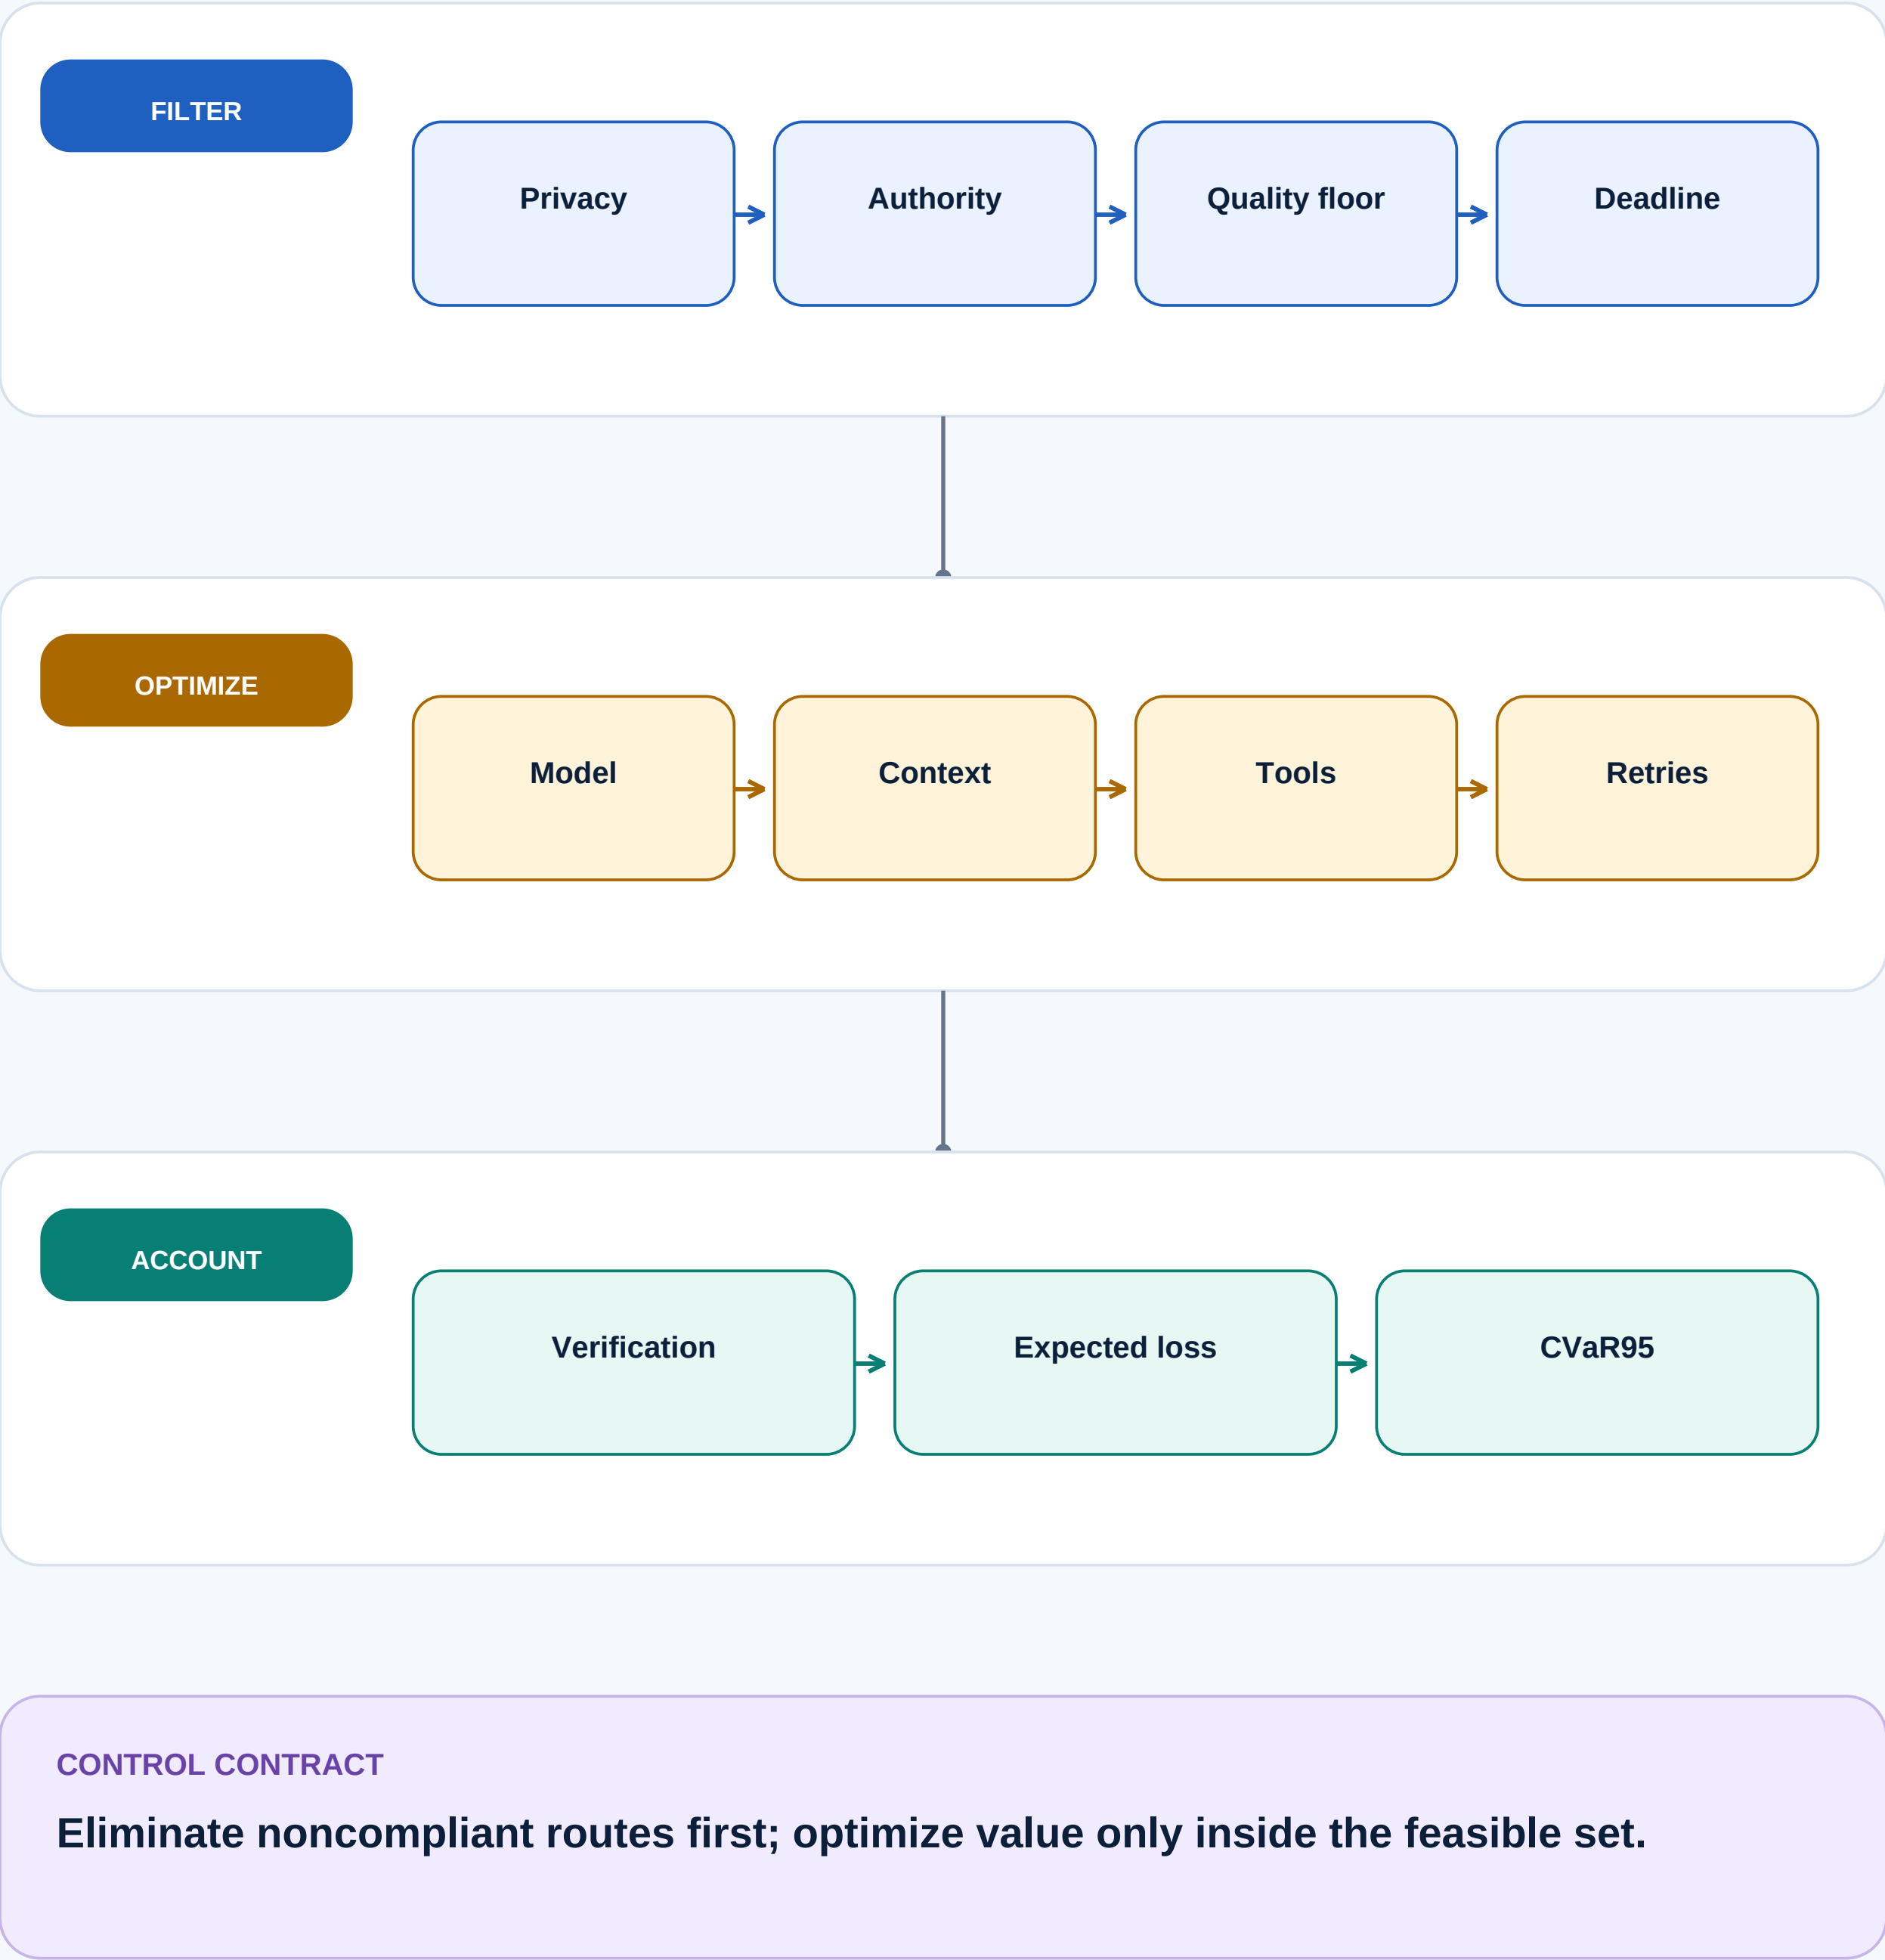

DESIGN PRINCIPLE

Eliminate noncompliant routes first; optimize value only inside the feasible set.

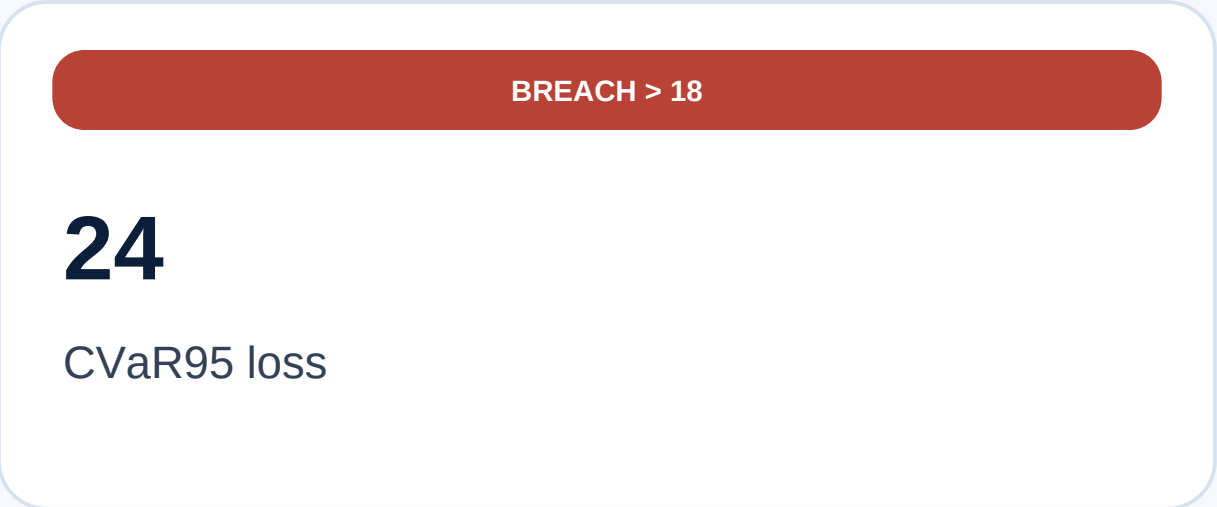

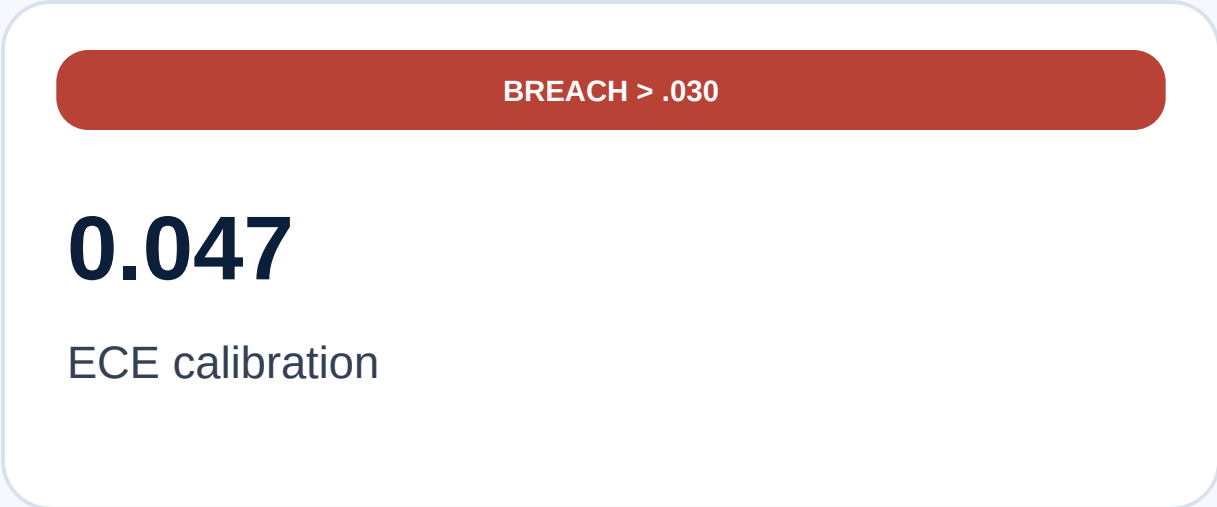

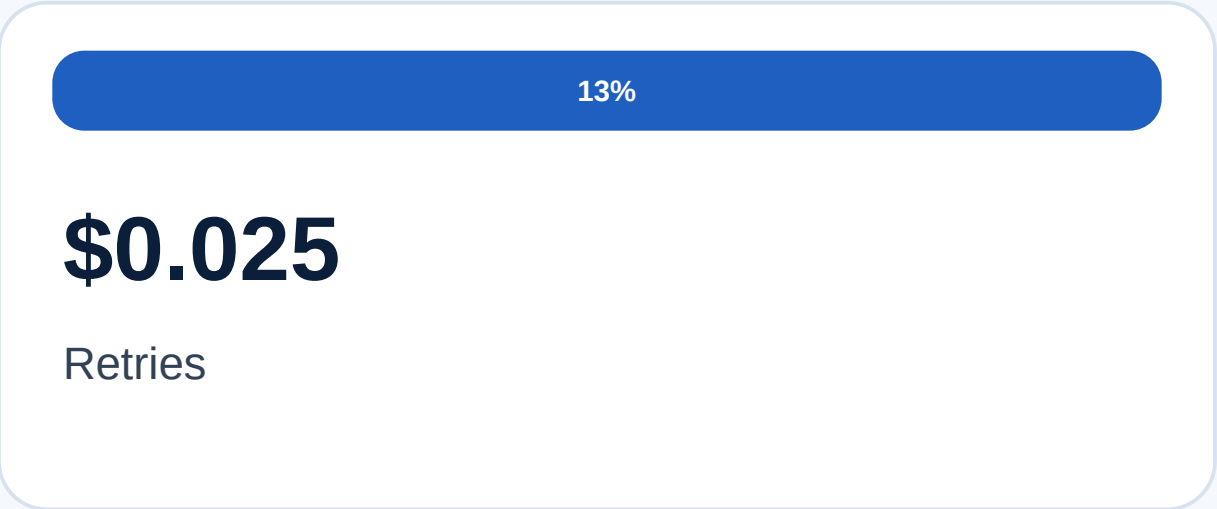

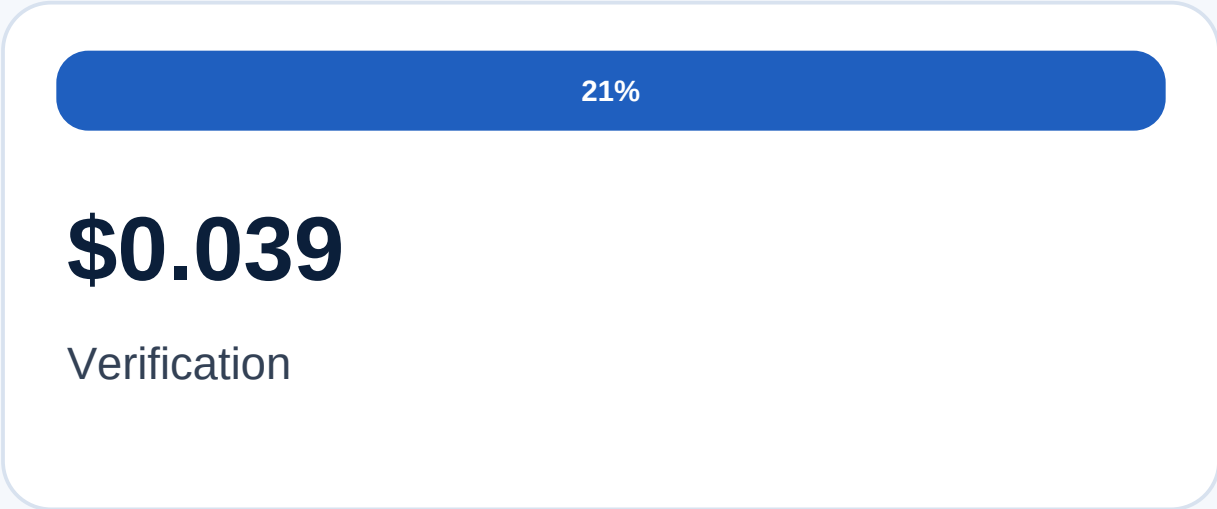

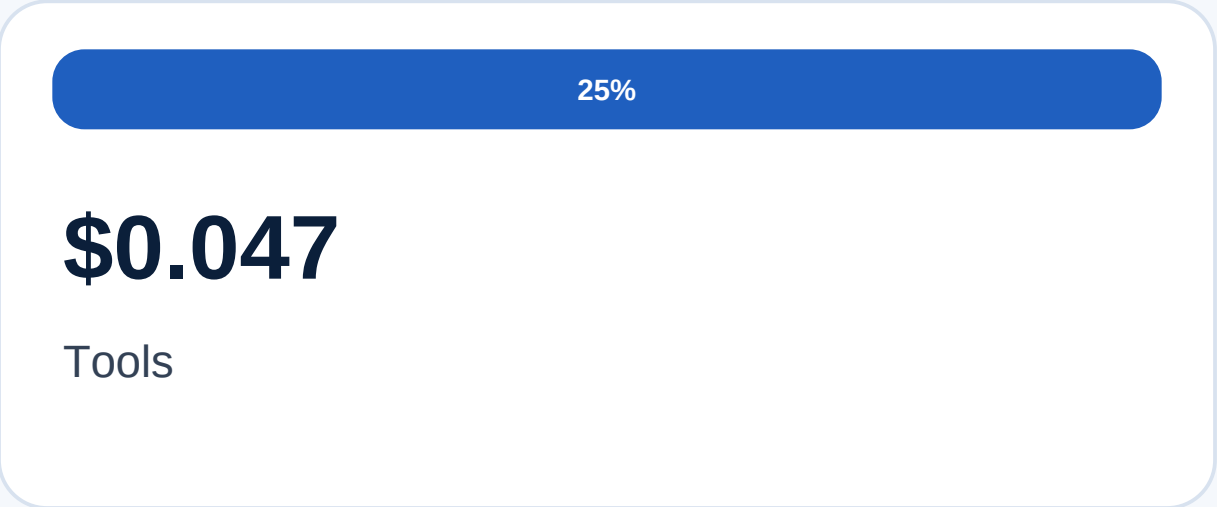

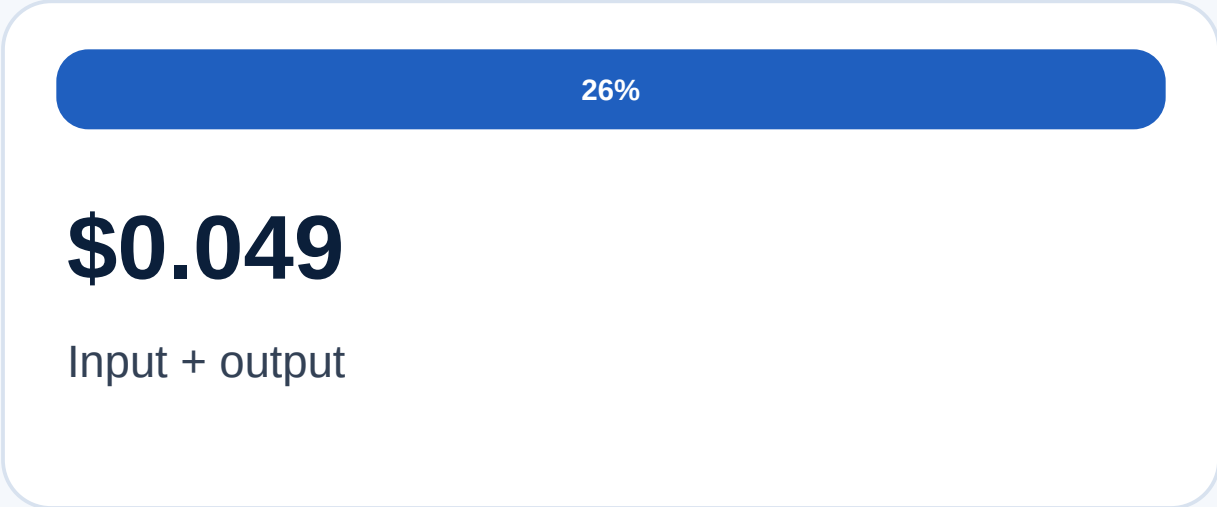

Model Routing control architecture

Explicit planes separate decision, authority, execution and proof.

Token price is only one line in the route ledger

Critical quality can pass while calibration and tail loss breach

DECISION RULE

Choose the lowest-risk feasible route per task class, then recalibrate on verified outcomes.
