

Price the verified outcome, not the model call

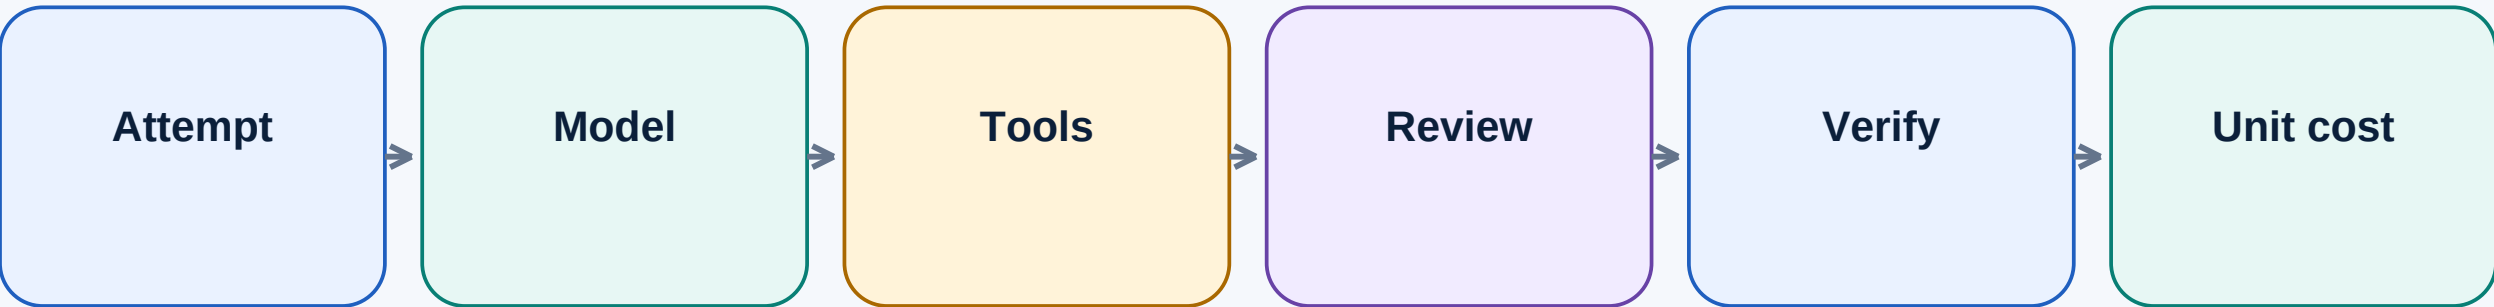

The denominator and control plane dominate the economics of production agents.

THE OPERATING NUMBER

20.8% vs 68.4%

Inference share versus human review plus always-on control-plane share

CONTROL PATH

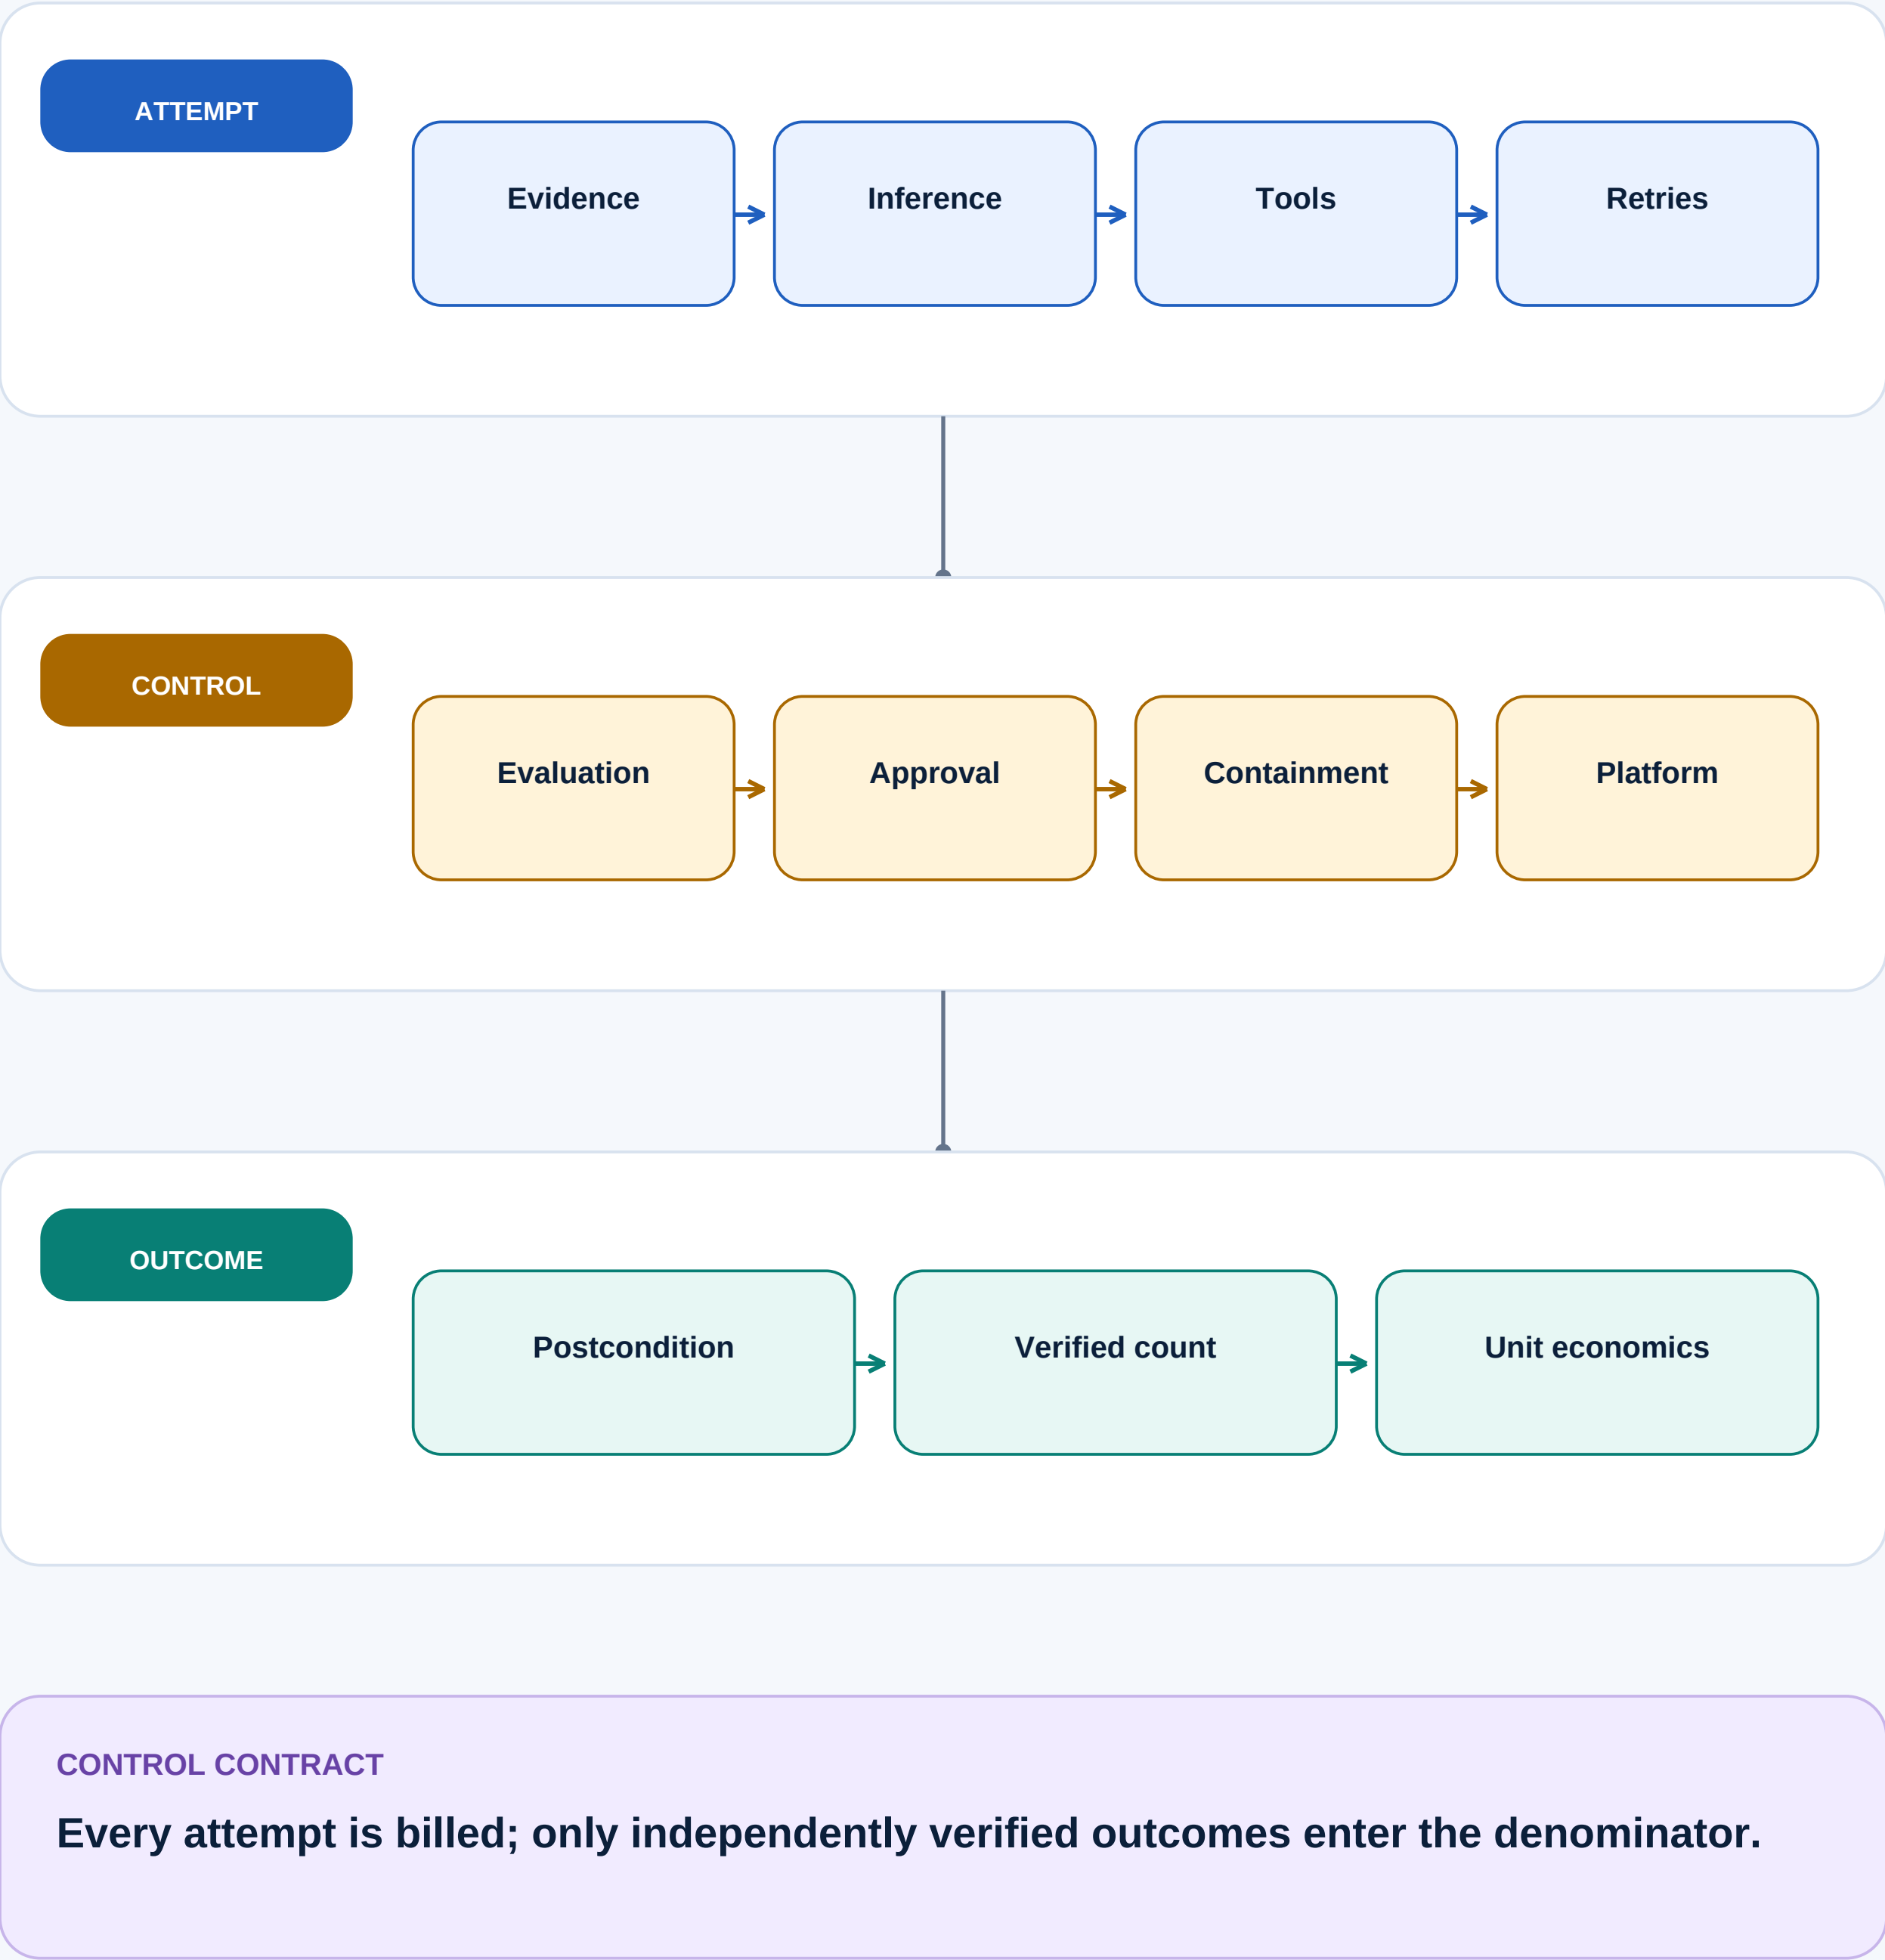

DESIGN PRINCIPLE

Every attempt is billed; only independently verified outcomes enter the denominator.

Agent Economics control architecture

Explicit planes separate decision, authority, execution and proof.

Verification rate is the largest modeled cost lever

\$0.9502 per attempt becomes \$1.135 per verified outcome

MODEL

40,000

Monthly attempts

20.8%

\$0.1980

Inference

43.4%

\$0.4125

Human review

25.0%

\$0.2375

Tier-0 platform

DENOMINATOR

83.7%

Verified rate

VERIFIED

\$1.135

Unit cost

DECISION RULE

Optimize verification, reviewer minutes and route quality before negotiating token price.
